Boost engagement and conversions with a seamless, high-performing website

User-centric UX/UI Designs that you can count on

I'm a UK-based UX/UI designer that specialises in providing web and mobile designs using Figma. As a creative professional, I'm passionate about designing digital concepts that focus on the user's needs - leading to higher conversions.

My expertise within the digital space allows me to offer an extensive range of services including UX Design, UX Consulting and Freelancer Coaching.

Let's get down to business

How can I help you?

As a freelance UX designer, I can design your ideal website from start to finish - or improve your current one. With a detailed keen eye for aesthetics and a strategic mindset, I offer a range of services that encompass the entire end-to-end design journey.

Services I offer

Icon

Product Design

Launch new high-quality products or improve existing ones. My custom product design service is tailored to meet any need, delivering results-driven, easy-to-manufacture and beautiful creations you can be proud of.

Icon

iOS & Android Apps

Turn your app vision into reality. I specialise in designing user-friendly interfaces that make navigating your app a seamless delight.

Icon

UX/UI Wireframes & Prototyping

See your vision come to life. With interactive prototypes, you'll experience the user journey firsthand, allowing you to see how things can work before handing designs over to developers.

Icon

Freelance Coaching

Let me empower you with the essentials to kickstart your freelance journey, enabling you to seize control of your schedule, embrace creative liberty, drive your choices, and establish the work-life equilibrium you truly deserve.

Icon

Consultation & Strategy

Together, we'll map your path to success. I'll assess your needs, offer insights, and guide you towards the most effective design solutions.

Crafting your vision: a seamless journey

Here's how we'll work together

As a freelance UX designer, I can work closely with my clients throughout the entire process, ensuring the final product exceeds your needs and expectations.

1

Discussion

Let's chat! I'll grasp the essence of your project and learn about your goals, so I can consult for the ideal approach, whether you're starting from scratch or refining existing concepts.

2

Research & Analysis

Where possible, I analyse your current product's data to see where the user experience can be refined. I'll have a closer look at competitors and review the areas of improvement.

3

Concept Development

Once we get an overview of where the real problem lies, I'll work on user flows based on your business's goals and requirements - while focusing on the user's needs. After the basic flows are confirmed, I'll design wireframes to ensure we're on the same page.

4

Designing & Prototyping

See your product come to life. Using Figma, I will create pixel-perfect prototypes to bring your product's vision into reality.

5

Testing

Before handing things over to developers, I conduct qualitative user research, ensuring the designs are ready for the real world. Here I delve into user insights and refine interactions where needed.

6

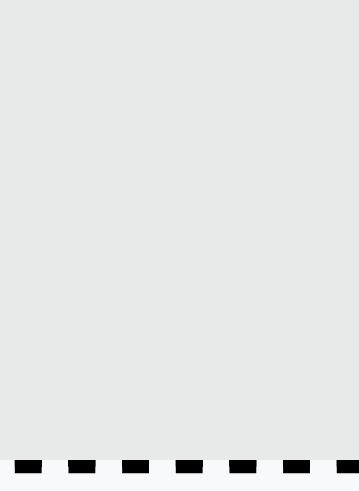

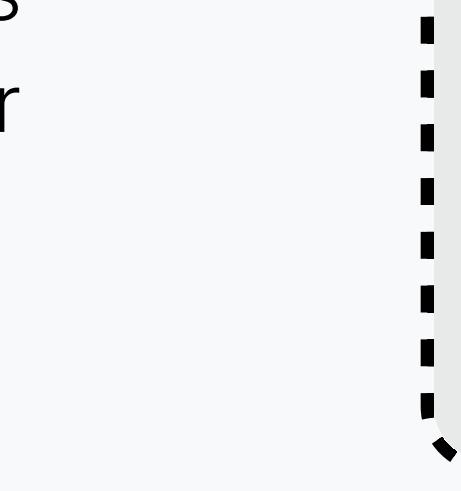

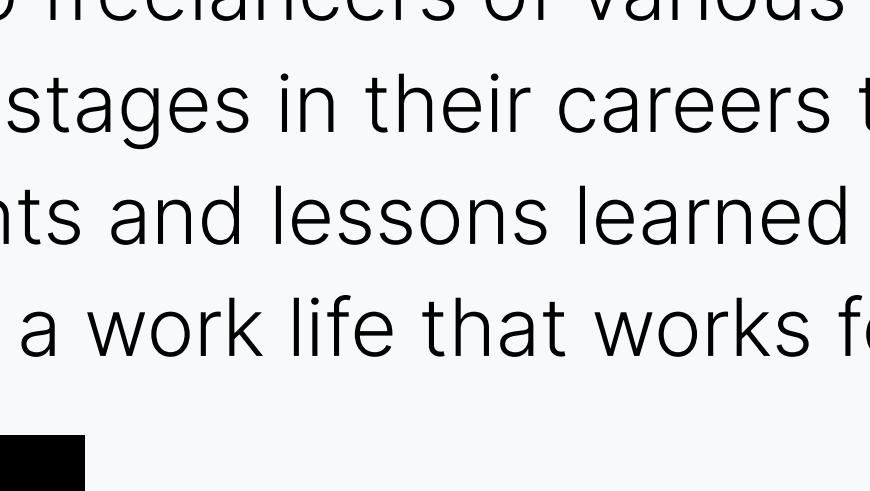

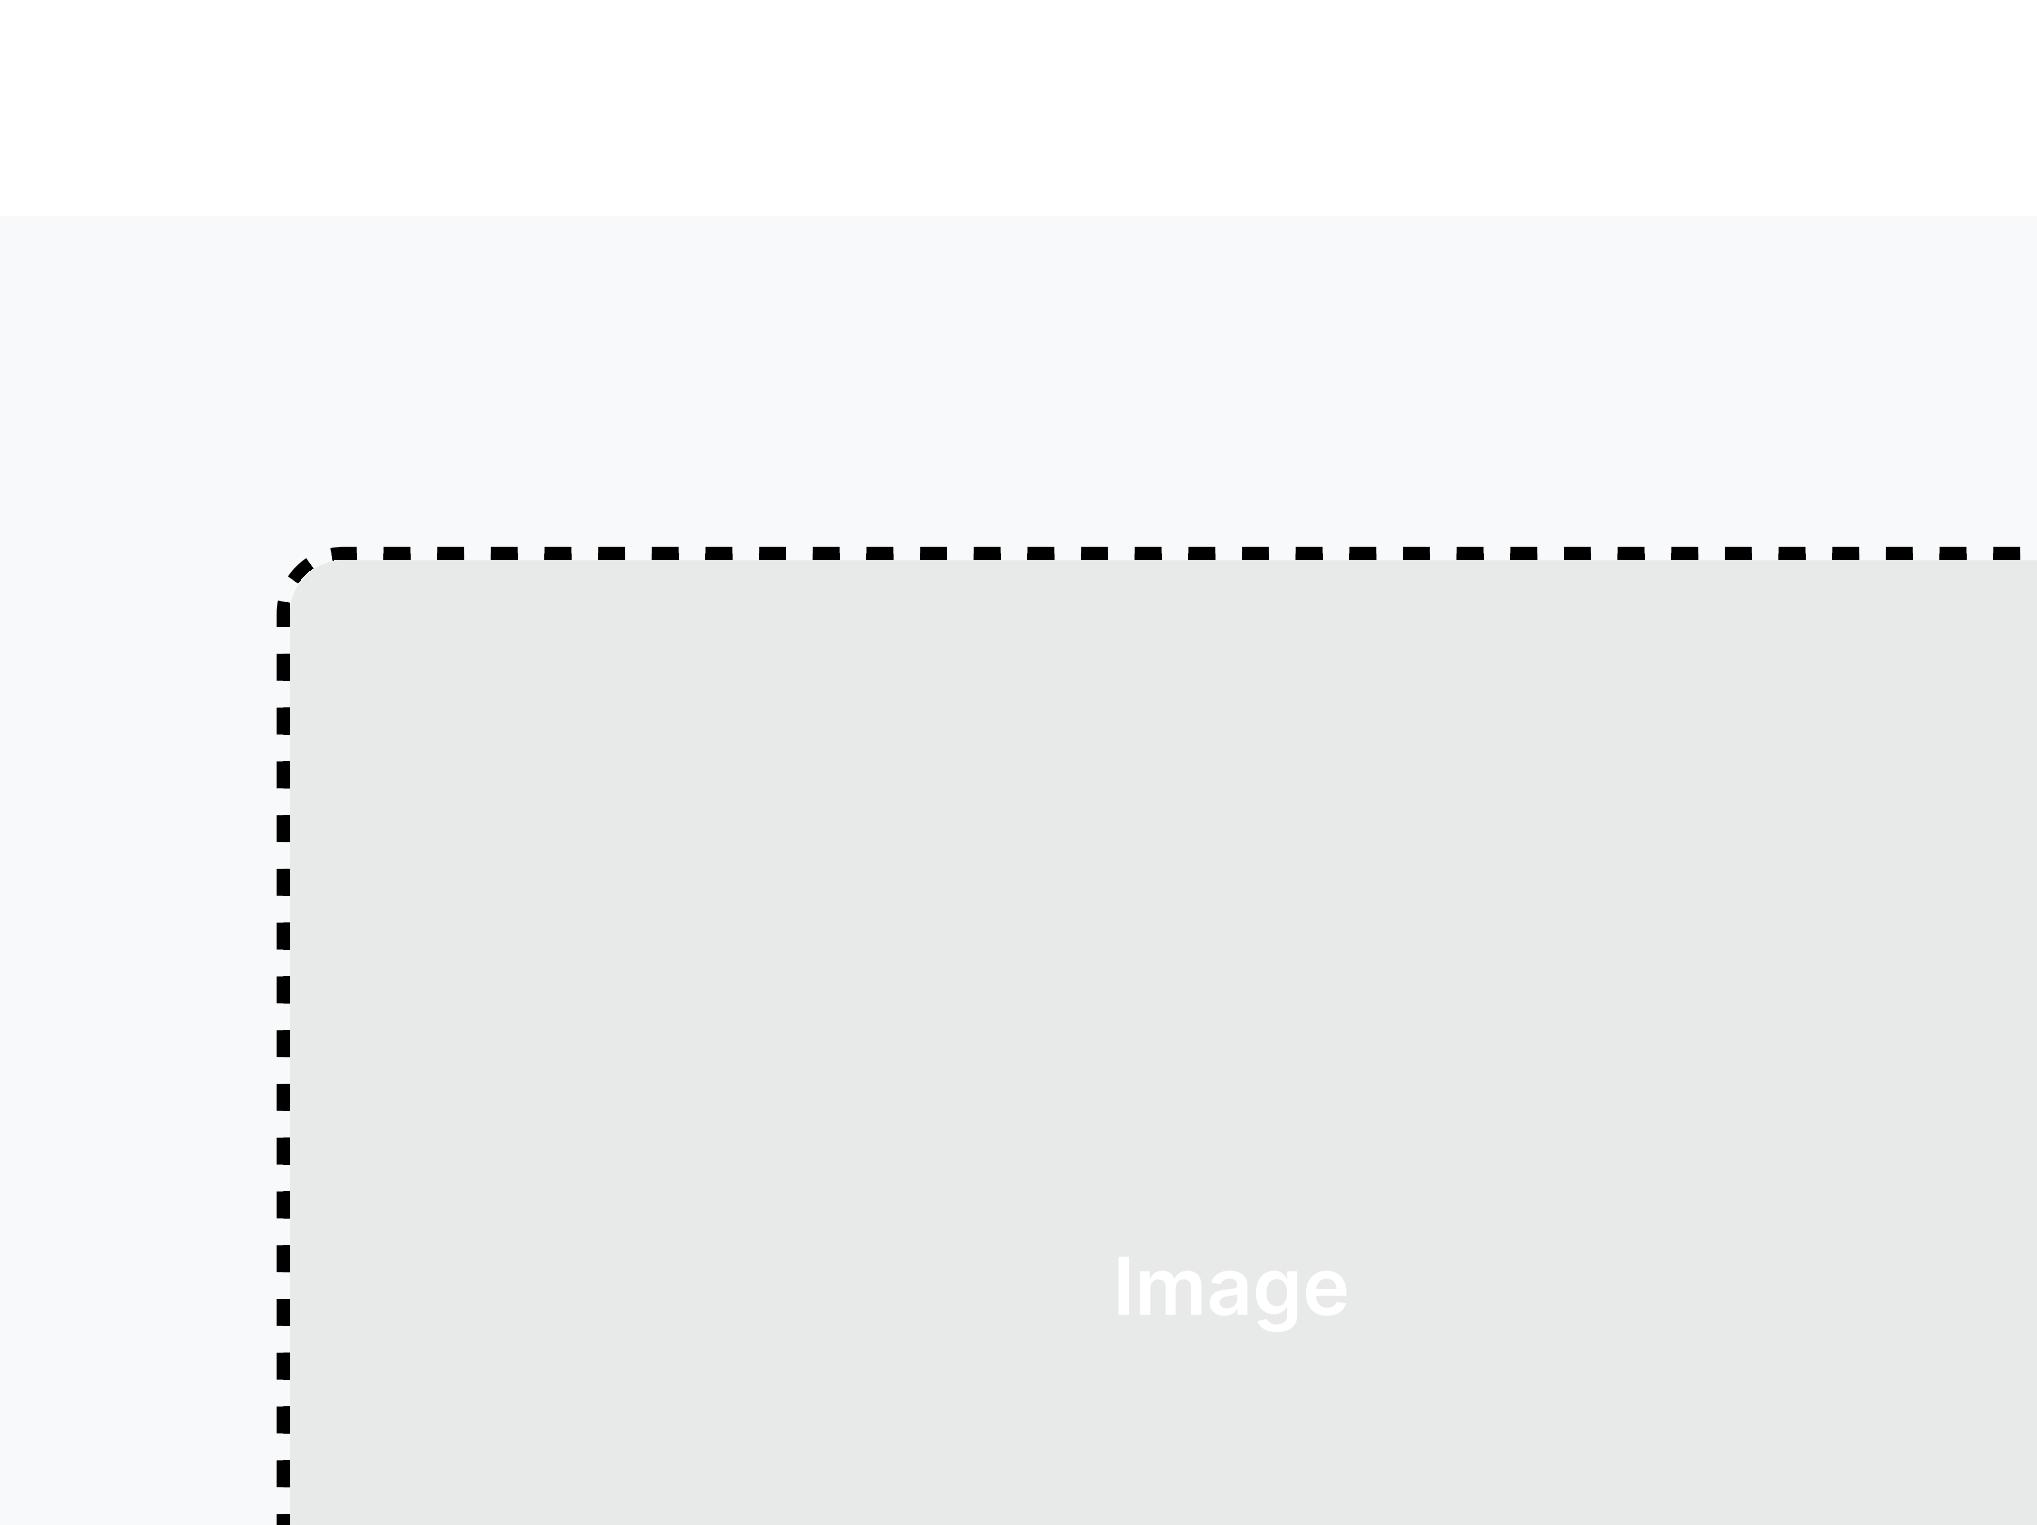

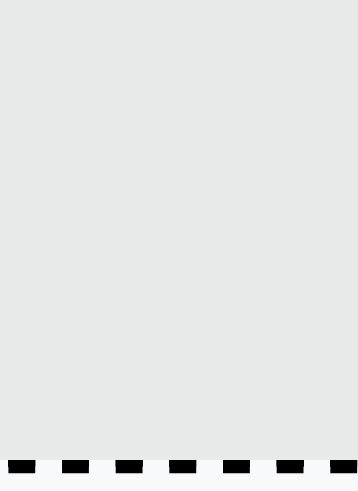

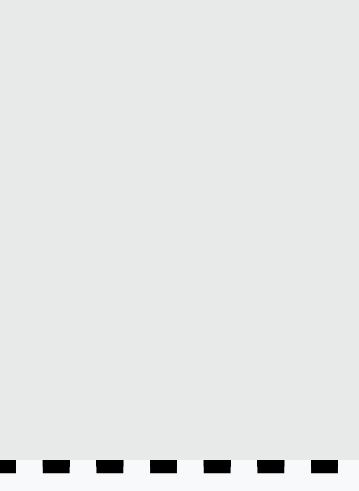

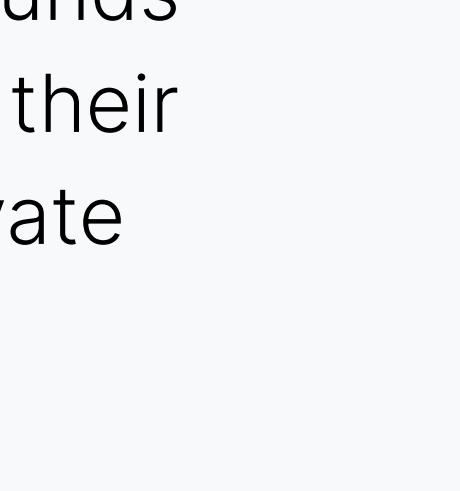

Hand-Off Documentation

If developers weren't already involved from the start to ensure the designs created can actually be implemented, I'll create a cleaned-up version of the final designs, filled with annotations to hand over to your developers.

Designs that speak louder than words
